

Accelerate Mobile Application Proposal

Project Title

Accelerate Learning and Engagement Mobile Application

Purpose

The purpose of this application is to provide learners and administrators with a centralized mobile platform for accessing programs, engaging with learning content, receiving announcements, registering for events, and submitting feedback.

The application aims to improve communication, learner engagement, and accessibility within the Accelerate ecosystem by providing a modern cross-platform mobile experience.

Problem Statement

Learners often need to access information through multiple channels, making it difficult to stay informed about available programs, upcoming events, learning content, and important announcements.

This application will provide a single platform where learners can discover programs, access content, register for activities, and provide feedback, while administrators can communicate effectively with users.

Target Users

Learners

Learners will be able to:

- Browse available programs
- View program details
- Access learning content
- Register for events
- Receive announcements
- Submit feedback
- Manage their profiles

Administrators

Administrators will be able to:

- Publish announcements
- Manage learning programs
- Collect user feedback
- Monitor participation and engagement

Core Features

User Authentication

- User login
- Registration
- Profile management

Home Dashboard

- Personalized welcome screen
- Announcements section
- Featured programs
- Search functionality

Program Discovery

- Browse available programs
- View detailed program information
- Access learning materials

Learning Hub

- Module-based learning content
- Progress tracking
- Content navigation

Feedback Collection

- Ratings and reviews
- Feedback forms
- User comments

Notifications and Announcements

- Important updates
- Event notifications
- Program announcements

User Journey

A learner opens the application and signs in. From the Home Dashboard, the learner can browse available programs, view detailed information, register for events, and access learning materials.

After participating in a program or event, the learner can submit feedback through the feedback module. Administrators can use this feedback to improve future programs and learner experiences.

Technology Stack

- Flutter SDK
- Dart Programming Language
- Android Studio
- Visual Studio Code
- GitHub

- Mock APIs

Wireframes Included

The project includes low-fidelity wireframes for:

- Login Screen
- Home Dashboard
- Program Details Screen
- Feedback Screen
- Profile Screen

Expected Outcome

The final solution will be a cross-platform mobile application that enhances learner engagement, simplifies access to information, and improves communication between learners and administrators within the Excelerate ecosystem.
